

## How to use the Brain style Profiles to improve performance.

Get equipped as an EQ Profiler including four different measurement tools to use emotional intelligence to improve performance. These are practical tools managers, leaders and Educators can use to develop effective performance conversations and unlock the “people-side” of performance

## The Brain Profiles provide a practical, powerful introduction to emotional intelligence.

Delegates will get to understand their own BRAIN STYLE and BRAIN TALENTS and how to leverage these EQ insights to improve their own communication and performance.

The BBP and BTP are designed as introductory tools to engage participants in learning more about their brains, emotions, and becoming more effective;

The profiles are ideal for ;

- Improving communication, problem-solving, teamwork, collaboration, conflict resolution, innovation, relationships and people-skills.
- Coaching managers (by looking at their profiles and the profiles of their team).
- Talent Planning identifying key attributes required in developing a work force or team
- Selection using emotional intelligence in the interview process, using the Brain Discovery profile
- Introducing the concept of emotional intelligence in a simple, clear framework

The BBP includes three scales: Focus, Decisions, and Drive. Rather than examining behaviour, the tool focuses on patterns of thinking, creating a style that underlies behaviour.

### Who should attend?

Managers, leaders, Educators and people responsible for creating effective people-leadership.
